

# Harlobond-50

Carrier Starch

300 #'s in a 700 Gallon Batch

## DESCRIPTION

*Harlobond-50* is a high solids, starch-based adhesive carrier product based on technology similar to that used to manufacture our carrier assist products. High solids carrier products are used when corrugated board performance needs to be maximized or when machine performance on heavy board grades is an issue. *Harlobond-50* ensures excellent adhesive shear stability, superior tack and cohesiveness, while also providing the necessary green bond strength for high basis weight grades. When used as a base for water resistant adhesive, *Harlobond-50* creates the proper environment for wet strength crosslinking.

## CUSTOMER BENEFITS

- Increased productivity on the corrugator
- Excellent water resistant board quality
- Enhanced board quality
- Improves multiwall runnability
- Reduces loose edges
- Eliminates bulk starch delivery variance
- *Safe to use*

## FEATURES

- Faster/accelerated setback
- Improved penetration
- Higher carrier starch solids
- Improved dry bond strength
- Outstanding water hold-out
- Excellent green bond strength
- Complete carrier starch
- FDA approved for food packaging adhesive
- Convenient 50-lb. bags

## PACKAGING

Dry Product
