

Hydratite-401

Wet Strength Resin

50 -120 #'s in a 700 Gallon Batch

DESCRIPTION

Our premium wet strength resin product has set the standard for low formaldehyde content and water-resistant potential in the corrugated container industry for many years. Since its introduction in 1982, *Hydratite-401* has been the leader for WPA with the highest resin solids content combined with low free formaldehyde, less than 0.3%. Whether used via injection, post addition batch style, or as an immediate formula component, *Hydratite-401* provides the maximum water resistance for starch based corrugating adhesives.

CUSTOMER BENEFITS

- Excellent water resistance levels
- *Safe to use, complies with OSHA regulations*
- Visual confirmation of use
- Excellent reactivity profile

FEATURES

- Liquid thermosetting resin
- *Less than 0.3% free formaldehyde*
- Distinctive brown color
- Higher resin solids
