

OBM-HS

One Bag Mix "OBM" System
1500 #'s in a 550 Gallon Batch
30% Solids
30 X 50 pound bags
Lesser amounts used for microbatches

DESCRIPTION

OBM-HS is a member of our *OBM-System* line of products. *OBM-HS* is a higher solids formulation of our original product *OBM-S*. As a one-bag mix, *OBM-HS* requires only warm water and sufficient agitation to develop a starch-based corrugating adhesive. This higher solids formulation produces drier, flatter board, particularly when laminating adhesives are used on the double backer side. *OBM-HS* provides the convenience of multiple batch sizes while eliminating the need for dangerous chemicals, such as caustic soda.

CUSTOMER BENEFITS

- Simple and foolproof preparation
- Successful preparation of smaller batches (less than 300 gallons) of corrugating adhesives
- Minimizes washboarding and enhances bond strength on the single face side

FEATURES

- Complete domestic adhesive
- Precise blend of raw material into a complete product
- Designed as a single facer or double backer adhesive for maximum performance
