

# XM-5 Penetrant

Adhesive Stabilizer

½ - 4 #'s per 700 Gallon Batch

(Used as necessary)

## DESCRIPTION

*XM-5 Penetrant* is a conditioning agent which facilitates adhesive release into paper substrates. By reducing surface tension, *XM-5 Penetrant* facilitates the rapid migration of the liquid phase of starch adhesive into the paper substrates to be bonded. This third generation penetrant was developed to penetrate and assist bonding of liners coated with synthetic polymers. The chemical composition of *XM-5* also allows it to penetrate even the most difficult to bond substrates, including preprinted liners with a varnish overcoat.

## CUSTOMER BENEFITS

- Enhanced starch adhesive penetration potential
- Low foaming action
- Consistent performance
- Easy to use

## FEATURES

- Very effective surface tension reduction
- Precise quality control
- Convenient drum or bucket containers are available

## PACKAGING

 Liquid

**Color:** Blue

◆ \_\_\_\_\_ Drums      ◆ \_\_\_\_\_ 5-Gal.

**Weight/Unit:**

495 # Drum      45 # Plastic Pail
